Exp. 9 Deployment of Online Quiz Application using Azure and GitHub

AIM

To deploy an Online Quiz Application in Microsoft Azure using GitHub integration and enable continuous deployment.

TOOLS REQUIRED

- Microsoft Azure (Azure for Students Subscription)
- GitHub Repository
- Web Browser
- Node.js (Runtime Environment)

PROCEDURE

Step 1: Project Development

- Developed an **Online Quiz Management System** locally.
- Included features like:
    - User login
    - Quiz interface
    - Score calculation
- Tested the application locally before deployment.

Step 2: Upload to GitHub

- Created a GitHub repository:
  Online-Quiz-Management-System
- Uploaded project files using Git commands:

```
git init
git add .
git commit -m "Quiz App Initial Version"
git remote add origin <GitHub URL>
git push -u origin main
```

- Verified repository upload successfully.

Step 3: Create Azure Web App

- Logged into Azure Portal.
- Created a **Web App** with the following configuration:
  - **App Name:** quizapp-online
  - **Resource Group:** quizapp-online_group
  - **Runtime:** Node.js
  - **Operating System:** Linux
  - **Region:** Central India
  - **App Service Plan:** F1 (Free Tier)

Step 4: Configure Deployment Center

- Opened the Web App in Azure.
- Navigated to **Deployment Center**.
- Selected:
  - Source: GitHub
  - Repository: Online-Quiz-Management-System
  - Branch: main
- Authorized GitHub access.
- Saved configuration.

Step 5: Continuous Deployment Setup

- Azure automatically created a **GitHub Actions workflow**.
- Deployment process:
    1. Code pushed to GitHub
    2. GitHub Actions triggered
    3. Azure builds and deploys app

Step 6: Deployment Verification

- Azure Web App status: **Running**
- Accessed the application using default URL:

https://quizapp-online-gugta9hkf2eadnh4.centralindia-01.azurewebsites.net

- Verified:
    - Quiz loads correctly
    - User interactions working
    - No runtime errors

RESULT

The Online Quiz Application was successfully deployed in Microsoft Azure. Continuous deployment was achieved using GitHub integration, enabling automatic updates whenever changes are pushed to the repository.
